

IV. AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A sparkling laminate film comprised of a sparkling laminate film body including a transparent surface substrate, a metal vapor deposited layer comprised of a vapor deposited layer of a Hastelloy-an alloy consisting essentially of nickel, chromium, molybdenum and tungsten and a vapor deposited layer of chromium or chromium alloy successively formed on a back surface of said transparent surface substrate, and a backing material integrally laminated with said metal vapor deposited layer through an adhesive layer.

2. (Currently Amended) A sparkling laminate film comprised of a sparkling laminate film body including a transparent surface substrate, a metal vapor deposited layer comprised of a vapor deposited layer of a Hastelloy-an alloy consisting essentially of nickel, chromium, molybdenum and tungsten and a vapor deposited layer of titanium or titanium alloy successively formed on a back surface of said transparent surface substrate, and a backing material integrally laminated with said metal vapor deposited layer through an adhesive layer.

3. (Currently Amended) A sparkling laminate film comprised of a sparkling laminate film body including a transparent surface substrate, a metal vapor deposited layer comprised of a vapor deposited layer of a Hastelloy-an alloy consisting essentially of nickel, chromium, molybdenum and tungsten and a vapor deposited layer of nickel or nickel alloy successively formed on a back surface of said transparent surface substrate, and a backing material integrally laminated with said metal vapor deposited layer through an adhesive layer.

4. (Original) A sparkling laminate film as set forth in any one of claims 1 to 3, wherein said metal vapor deposited layer has a thickness of 150 to 750Å.

5. (Original) A sparkling laminate film as set forth in any one of claims 1 to 3, wherein a hue angle (H°) when measuring the color of said transparent surface substrate is in a range of 245 to 265.

6. (Original) A sparkling laminate film as set forth in any one of claims 1 to 3, wherein said transparent surface substrate is a fluorine- or polyester-based film of a thickness of 15 to 100 μm .

7. (Original) A sparkling shaped article comprised of a shaped body and a sparkling laminate film as set forth in any one of claims 1 to 3 integrally bonded to a surface of that body.
